## **ERP services statement for VISHNU DataPrize web site:**

“VISHNU DataPrize Enterprise Resource Planning (ERP) solutions are fitted to our clients’ individual needs. Our vast experience has taught us that no two clients have identical ERP challenges – therefore no one standardized ERP solutions package will take care of all existing problems. What solves our clients’ data organization, transmittal and integration problems is the combination of a solid ERP systems option customized by our experienced team’s technology savvy and thorough understanding of market operational demands.

Manufacturers, hospitals, banks, government services agencies, small businesses and other enterprises call upon VISHNU DataPrize to find solutions for, among other things, slowdowns in productivity, end-product quality output improvement, data entry and retrieval, and employee collaboration and communication. We have encountered clients who have had different stand-alone computer systems servicing each discrete departmental function within their enterprise. While the individual departments communicated on an intramural basis, it was the attempt to freely communicate with other departments that proved to be a formidable challenge.

VISHNU DataPrize has encountered preexisting corporate-level client networks that represented a hodge-podge of wished-for connectivity. For example: Apple workstations patched into a MS Windows Server 2003 R2 network, running Windows OS on the majority of the remaining of workstations, compounded by some systems running UNIX ports of Oracle Database 10g, while other systems utilized the Windows version, and those doing so made matters worse by running different Windows operating systems on individual nodes. In addition, the company’s sales division installed Novell’s GroupWise in an attempt to get their field representatives’ PDA’s in data-sharing sync. It wasn’t successful.

The VISHNU DataPrize ERP philosophy is ‘pure’ thinking, that is, we approach the client’s situation, thoroughly examine existing problems, promote solutions, institute our experience, methods, systems and software with the objective of reducing over-engineering. By doing so, we place the client’s factories, branches, distribution offices and all servers, networking functions, nodes and workstations into operational harmony. If this can be done with an existing ERP solution, we will implement it; if not, VISHNU DataPrize will craft an [application software solution](#) that will enable data migration and system interoperability.

VISHNU DataPrize ensures the continued success of its ERP custom solutions by providing clients with on-going, scheduled employee training programs engineered to guarantee a stable, secure running ERP environment. Our training compensates for new hires who are used to different systems, current staff who have fallen behind on recertification, or, new managers who are not sufficiently prepared for their role. We promote ERP stakeholder ownership.

Through implementation of the right ERP system for each client’s needs, customized software authoring and application (based on the SEI-CMM framework), and the best personnel training, tech support and systems maintenance in the business, VISHNU DataPrize not only makes its clients happy, but most important, we save them time, money and aggravation. [Contact us now](#) and one of our Customer Service specialists will be happy to explain the powerful VISHNU DataPrize options available to your business, agency or enterprise. ##
